

Laurie McClenahan Hietter has over 30 years of experience analyzing the environmental effects and permitting geothermal and other energy and infrastructure projects through the National Environmental Policy Act (NEPA) and California Environmental Quality Act (CEQA), as well as other state- and country-specific regulations. She began her career at the U.S. Geological Survey and founded MHA Environmental Consulting, Inc. in 1983. She then founded Panorama Environmental, Inc. with Tania Treis in 2011. Laurie has focused on identifying and addressing environmental issues early in design to define projects that are easier to permit. She has broad experience in renewable energy permitting (geothermal, wind, solar) and also has extensive experience permitting projects for utilities, the California Public Utilities Commission, water districts, and private developers for projects including transmission lines; water, gas and oil pipelines; underground gas storage, power plants, and other infrastructure projects. Laurie has taught courses on the environmental permitting process and impact analysis for many groups and associations. Laurie serves on the Kenya Electricity Generating Company Geothermal Board of Consultants
